WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

April 15, 2021

Severe Storms Outlook

Gulf Coast

- Since the middle of March, parts of the southern United States have been inundated by rounds of drenching rain and pummeled by severe weather.
- Some areas have even reported rainfall amounts that are greater than 300 percent of normal since March 13.
- Those looking for a break from the persistent wet conditions are not in luck, AccuWeather forecasters say.
- Through Friday, and in some cases through the weekend, more rounds of showers and thunderstorms will be capable of producing up to a foot of rainfall and damaging wind gusts along the already waterlogged Gulf Coast.
- "Disturbances moving eastward along the front will help to fuel the storms," Walker said, "Some locations can be hit by more than one heavy, gusty storm per day over multiple days through the end of this week and into this weekend."
