

DAILY DART

WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

March 9, 2022

Severe Weather Outlook

- Gusty thunderstorms are anticipated in the New Orleans and Mobile, Alabama, area.
- On Wednesday and Wednesday night, the National Weather Service's Storm Prediction Center (SPC) is highlighting an area from the Florida Panhandle to coastal North Carolina to have gusty or severe thunderstorms.
- Though the dangers of the storms should not be overlooked, they can also provide much-needed relief for wildfires burning across the Florida Peninsula.
- AccuWeather long-range meteorologists are forecasting rain and thunderstorms to continue advancing across the South into the weekend along a cold front.
- Some of the thunderstorms can be severe on Wednesday and again on Friday in the zone from the Florida Panhandle to the coastal areas of the Carolinas.
- Along with the risk of severe thunderstorms with high wind gusts is the potential for a few tornadoes and waterspouts.
- A second storm could strengthen and race northward at the beginning of the weekend, bringing more rain and flooding potential to the region.
