WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

April 8, 2024

Severe Weather Threat

- Severe storms with very large hail, damaging wind gusts and possible tornadoes will threaten the southern Plains, Gulf Coast and other parts of the South nearly every day this week with the most dangerous threat being a potential for overnight tornadoes.
- The week ahead will feature day after day and round after round of thunderstorms with heavy rain, very large hail, damaging winds and possible tornadoes.
- The repeated soakings set several cities up for multiple inches of rain including Jackson, Mississippi, and Plano, Texas, which could see up to 5 inches of rain by Thursday. Little Rock, Arkansas, could potentially see up to 8 inches.
- Nearly 34 million Americans are in the severe weather threat zone for Monday. "Multiple rounds of severe thunderstorms should develop from early afternoon Monday through Tuesday morning across a large portion of the southern Plains into the Mississippi Delta region," NOAA's Storm Prediction Center warned. "Large to very large hail is the main threat, especially over northwest Texas, though isolated tornadoes and severe wind gusts will also be possible."
- On Tuesday thunderstorms will settle down midday but pick up again in the afternoon as a low-pressure system from the Southwest moves into the southern Plains.
- The SPC has put over 20 million in a Level 2 or 3 severe weather risk zone in eastern Texas and Louisiana, with potential for strong tornadoes of EF-2 or greater around Beaumont and Lufkin, Texas stretching into Natchitoches, Louisiana. In addition, a widespread large hail threat covers much of the level 2 and 3 area.
