WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

June 20, 2022

## Severe Weather Outlook

- Summer officially begins on Tuesday, and it could be a stormy start to the new season for millions of people across part of the central and eastern U.S.
- The northern Plains has been no stranger to thunderstorms as of late with multiple rounds of severe weather rumbling across the region.
- Severe weather tracked across part of the central U.S. Sunday, with over 60 reports of hail and damaging winds received by the Storm Prediction Center. Most notably in the Plains, a 79-mph wind gust was reported in Medina, North Dakota, while tennis ball-sized hail pelted Alzada, Montana.
- Severe weather also occurred in the Intermountain West, with the arrival of the North American monsoon bringing showers and storms to much of the region. Severe storms were isolated, although a 78-mph wind gust was observed near Lakeside, Utah.
- Rounds of strong storms will continue right into the new week, with Monday potentially presenting the highest risk of storms.
- Thunderstorms are likely to fire in eastern Montana and the western Dakotas before sliding eastward, bringing a threat of hail and damaging winds with them. By Monday night, storms will work their way into Minnesota.
- High winds will be a particularly notable concern with an AccuWeather Local StormMax™ of 90 mph (145 km/h), but an isolated tornado cannot be ruled out.
- Residents in cities such as Bismarck and Fargo, North Dakota, will want to monitor weather conditions and have a way to receive watches and warnings if threatening weather is approaching.
- On Tuesday, the threat of severe storms will shift southeastward, stretching from Kansas to Wisconsin.
