WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

August 10, 2021

## Tropical Activity

### Atlantic – Potential Tropical Cyclone Six

- A disturbance in the eastern Caribbean Sea is likely to soon become Tropical Storm Fred as it brings heavy rain and gusty winds to parts of the Caribbean Islands over the next few days.
- The National Hurricane Center (NHC) has designated a low-pressure system spreading showers and thunderstorms into the eastern Caribbean Sea as "Potential Tropical Cyclone Six".
- Tropical storm watches and warnings have been issued from parts of the Lesser Antilles to the southeast Bahamas and Turks and Caicos. This includes a tropical storm warning for Puerto Rico and the Virgin Islands, where tropical storm conditions (winds of at least 39 mph) are expected to begin later Tuesday.
- Puerto Rico and the Virgin Islands could also see 2 to 4 inches (locally up to 6 inches) of rainfall from this system, which has prompted the National Weather Service to issue a flash flood watch for those areas until Wednesday evening.
- The official forecast from the NHC below shows that this system is likely to develop into Tropical Storm Fred on Tuesday as it moves generally toward the west-northwest.
- Interests in Florida should monitor updates to the forecast for this system, but it is too soon to determine what if any impacts could occur there by late this week or this weekend given the uncertainty in the long-range forecast.
