WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

January 15, 2026

Tropical Activity Eastern Pacific Basin

- From raging winter storms to tracking tropical weather in the U.S., experts are turning their attention to the tropics over the next few days for increased activity.
- While the system is unlikely to intensify beyond a depression and poses no threat to land, its formation would be historic.
- According to the FOX Forecast Center, no tropical development of any kind has ever been noted in the month of January in the Eastern Pacific basin.
- And while the National Hurricane Center is not yet officially monitoring the area, forecast models have consistently shown the possibility of a system organizing.
- An area of low pressure is forecast to develop over the weekend, as there is low wind shear due to the large-scale ridge of high pressure over the West Coast, where just enough activity could cause storms to develop.
- "The Exclusive FOX Weather Tropical Threat product shows possible development as early as Friday, well to the southwest of Baja California," said a statement from the FOX Forecast Center and chances for peak development will be Saturday.
- Should it develop, there are no indications that this system would become anything more than a weak tropical depression or storm.

Pending Individual Assistance Declaration Request

State	Event	Date Submitted	Approved/Denied/Pending	Number of Counties/Tribes
IL*	Severe Storms and Flooding July 25 - 28, 2025 (Appeal)	11/21/2025	Pending	3 Counties
