WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

December 14, 2022

Severe Weather & Tornado Activity

- A marathon of severe weather rampaged through the southern Plains Tuesday, spawning multiple tornadoes, injuring at least five people and claiming the lives of at least two people.
- Search and rescue operations continued into Wednesday after a dangerous tornado near Four Forks, Louisiana, which is about 25 miles southwest of Shreveport, killed at least two people.
- A tornado also reportedly destroyed several residences and injured dozens of people in Farmerville, Louisiana, which is about 105 miles northeast of Shreveport.
- Portions of North Texas were under a tornado watch early Tuesday morning as the storms began to fire up, tornado warnings following not long after. By 8:15 a.m., local time, Grapevine, Texas, a suburb roughly 20 miles to the northwest of Dallas, was placed under a tornado warning as the storms progressed eastward.
- The tornado in Grapevine, Texas, was one in a series of three to strike Tarrant County, according to preliminary findings.
- Storm surveys from the National Weather Service office in Fort Worth confirmed three tornadoes -- two EF0 and one EF1 tornado -- had carved a discontinuous damage track from the joint reserve base in Fort Worth to Grapevine.
- An EF2 tornado was confirmed in Wise Count, and the fifth confirmed tornado struck west of Paris, Texas, though the NWS has not yet released a rating.
- Earlier Tuesday morning, an EF2 tornado touched down in Wayne, Oklahoma, located about 43 miles southeast of Oklahoma City, before 5:30 a.m. local time, scattering debris across the area.
- No injuries have been reported from the tornado as of Wednesday morning, but the violent twister reportedly tore through several homes.
- The severe weather will continue to roll eastward into Wednesday evening, pushing into Louisiana, Arkansas and Mississippi -- states that were hit rather hard at the end of November by another tornado outbreak that claimed two lives.
- AccuWeather meteorologists warn the greatest risk of severe weather on Wednesday will focus from southeastern Louisiana and Mississippi to southern Alabama and the western portion of the Florida Panhandle.
