Flash Flood Threat Southeast U.S.

- A new round of widespread rain and thunderstorms is expected to develop across the Southeast and southern mid-Atlantic.
- Flash flooding is a concern up and down the East Coast on Monday.
- "The potential for flash flooding, even landslides, being mentioned by the National Weather Service office, there's a lot of concern for these communities," FOX Weather Meteorologist Britta Merwin said.
- There's also a severe weather threat across the region.
- Thunderstorms that develop will be capable of producing damaging wind gusts, large hail and even some tornadoes.
- The system is expected to move out of the Southeast by Tuesday, gradually diminishing the flash flood threat.
- Rainfall totals are expected to range from 3 to 5 inches across much of the Southeast.

Earthquake Activity Tennessee

- A 4.1 magnitude earthquake struck eastern Tennessee Saturday morning, with reports of shaking felt as far south as Atlanta.
- The epicenter of the quake was about 12 miles outside of Greenback, Tennessee, striking at 9:04 a.m. local time Saturday, according to the U.S. Geological Survey (USGS). The tremor was widely felt across the region.
- While no immediate damage was reported, the quake startled many residents in Tennessee and beyond. Experts note that earthquakes in the eastern United States, including those within the Eastern Tennessee Seismic Zone, are often felt across a much larger area than quakes of the same size in the western U.S.
- According to the USGS Aftershock Forecast, there is a less than 1% chance of a strong or potentially damaging aftershock in the coming days, however, several aftershocks of magnitude 3 or higher could still be possible. These could be felt near the epicenter but are not expected to cause damage.
