WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

March 14, 2024

Severe Weather Activity

- Dangerous storms are ongoing across the Midwest on Thursday morning after producing at least one tornado in Kansas and numerous hail reports, including around Kansas City and St. Louis in Missouri.
- Severe Thunderstorm Watches are posted until 10 a.m. CDT across central Illinois and until 12 p.m. CDT in parts of southern Illinois and eastern Missouri, including St. Louis.
- On Wednesday, around 100 reports of severe weather were recorded by the National Weather Service, making it the fourth-most-active day of 2024. In Alma, Kansas, there was a report of softball-sized hail (4 inches in diameter), which tied the largest hail report of the year so far.
- Hail and heavy rain are the main concerns as the storms are north of the warm front, where the air near the ground is too cool to support tornadoes, the FOX Forecast Center said. During the afternoon, these storms may transition into a squall line across Indiana and Ohio, with damaging wind gusts becoming a concern.
- The main event will begin during the afternoon as storms erupt from Illinois down to Texas ahead of an eastward-charging cold front.
- Due to the high amounts of energy and moderate wind shear, supercells capable of all severe weather hazards including tornadoes, damaging winds and very large hail may develop.
- The greatest risk for tornadoes and very large hail will be across eastern Oklahoma and Arkansas.

Pending Individual Assistance Declaration Request

State	Event	Date Submitted	Approved/Denied/Pending	Number of Counties
	N/A
