WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

May 16, 2023

## Severe Weather Outlook

- "A series of storms moving from the central Plains to the mid-Atlantic during the first half of this week will bring rounds of showers and thunderstorms from Missouri and Virginia on southward to the Gulf of Mexico," said AccuWeather Senior Meteorologist Matt Benz.
- As one storm crosses the central Appalachians, it will have the potential to produce severe weather into Tuesday evening.
- Flooding downpours and damaging wind gusts will be the most widespread risks with these thunderstorms from Kentucky and Tennessee to southern Virginia and North Carolina. However, a few tornadoes are possible, especially west of the mountains.
- Typical springtime showers and thunderstorms will be even more widespread Tuesday afternoon and evening, extending as far south as Pensacola and Jacksonville, Florida, and stretching as far north as Pittsburgh and Washington, D.C.
