WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

June 13, 2022

Severe Weather Outlook

- Severe storms have slammed much of the central United States in recent weeks with rounds of damaging winds, hail as large as softballs and isolated tornadoes repeatedly impacting the same locations. This week, AccuWeather forecasters anticipate more of the same.
- On Sunday, over 140 reports of severe weather were received by the Storm Prediction Center, including 4 reported tornadoes.
- Storms were especially intense in the northern Plains, where softball sized hail fell near Wall, South Dakota. Destructive straight-line winds were also reported, with a top wind gust of 91 mph in Saint Onge, South Dakota.
- A broad swath of the country may be threatened by storms once again on Monday.
- As a bulge in the jet stream continues to expand across the central United States, thunderstorms are likely to fire along the northern periphery and bring severe storms to portions of the Dakotas.
- Like on previous days, damaging winds and hail will be a primary threat from these storms. Hail may once again be very large, perhaps larger than golf balls, which can cause damage to vehicles and roofs.
- Meanwhile, as the northward expansion in the jet stream brings scorching triple-digit temperatures as far north as Iowa and Nebraska, it could provide a path for storms to race eastward.
- Chicago, Detroit, and Pittsburgh will be among the locations potentially impacted by intense, fast-moving storms this afternoon through the late-night hours.
- While not a certainty, a derecho may form as storms develop, bringing a wide swath of destructive winds as storms race across the Midwest. Alternatively, even if a derecho doesn't form, a large swath of wind damage can occur as a storm complex moves eastward.
- Late Monday evening into Tuesday morning, storms will likely continue into the Appalachians and Mid-Atlantic. Cities such as Staunton, Virginia and Washington, D.C. may be impacted by storms during the predawn hours Tuesday.
