WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

November 7, 2024

Tropical Activity

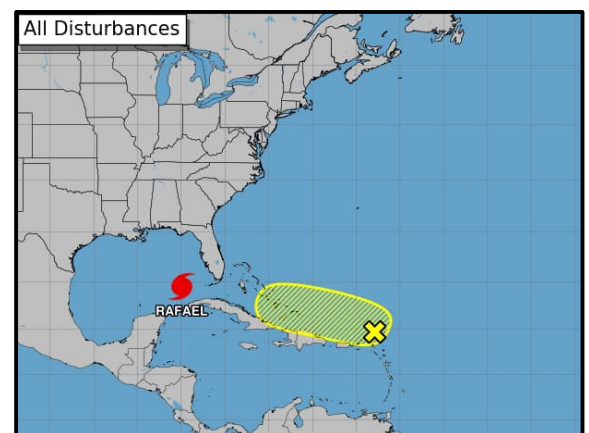

Atlantic –Hurricane Rafael (Cat 2)

- Rafael remains a Category 2 hurricane as of the latest advisory from the National Hurricane Center (NHC).
- All tropical alerts have been dropped and conditions are expected to gradually improve across the region
- Millions of people along the U.S. Gulf Coast will be closely monitoring the hurricane's progress as it slowly churns over the Gulf of Mexico.
- Rafael is about 200 miles west of Key West, Florida, and moving northwest at 9 mph.
- Rafael has maximum sustained winds of 105 mph.
- It is expected to weaken as the storm meanders in the Gulf of Mexico for the next several days.
- Computer forecast models strongly agree that Rafael will quickly turn to the west and begin its journey toward the central Gulf of Mexico.
- The steering currents assisting Rafael on its path from the Caribbean to the Gulf will begin to drastically weaken, allowing the hurricane to meander in the central Gulf through the weekend and into next week.
- The FOX Forecast Center added that there is an increasing consensus that Rafael will slowly move toward Texas or Mexico and steadily weaken as it does so.
- There is a chance that Rafael could make a turn to the north, but the FOX Forecast Center says that's looking less likely.

Atlantic – Disturbance 1

- A low pressure over the northern Leeward Islands continues to produce disorganized showers and thunderstorms.
- Some gradual development of this system is possible during the next couple of days while it moves westward near the Greater Antilles.
- Locally heavy rains are possible across the northern Leeward Islands, the Virgin Islands, Puerto Rico, Hispaniola, and the southeastern Bahamas through Saturday.
- Formation change: 48-hour – Low (20%); 7-day – Low (20%)
