WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

February 3, 2025

Winter Storm

Great Lakes & Northeast

- A potentially dangerous ice threat from a developing winter storm looms for millions of people from the Midwest to the Northeast this week.
- One of the recent atmospheric river storms that has been slamming the West Coast with heavy rain and mountain snow will play a role in the development.
- The FOX Forecast Center said a low-pressure system will develop over the Plains by Tuesday.
- Forecasters said that as the future system moves off to the east, a strong, southerly jet stream will kick in, pulling in warm, moisture-rich air across the eastern half of the U.S.
- That setup will create a well-defined warm front, separating the frigid air to the north from the record-breaking warmth swamping the South.
- Computer forecast models still disagree on the storm's track and on whether it moves east, as expected at this time, or if a new coastal low develops along the East Coast.
- The first scenario includes a stronger low-pressure system developing over the Plains, remaining the dominant system.
- With scenario two, a weaker low-pressure system would develop in the Plains, and a new coastal low would form along the East Coast and take over the dominant system.

Pending Individual Assistance Declaration Request

State	Event	Date Submitted	Approved/Denied/Pending	Number of Counties/Tribes
OK	Severe Storms, Straight-line Winds, Tornadoes, and Flooding	12/20/2024	Pending	6 Counties

*Award of task order to contractor pending
