WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

August 1, 2025

Flash Flood Threat Southeast U.S.

- Another days-long stretch of soggy weather is plaguing the Southeast, raising fears of flash flooding.
- A powerful cold front that brought deadly flooding to the Mid-Atlantic and Northeast is sliding south into the Southeast over the weekend.
- There is also a low chance of the front spawning some tropical development in the Atlantic, or along the Southeast coast.
- Heavy downpours are expected across the Southeast. Rainfall totals could reach 2–3 inches in many areas, with isolated amounts of 3-5 inches possible, according to the FOX Forecast Center.
- NOAA's Weather Prediction Center has placed a swath of the Carolinas at a level 2 out of 4 flash flood risk through Friday, shifting to coastal Georgia and South Carolina on Saturday.
- Coastal Carolinas and the mountains of western North and South Carolina have the greatest risk of getting more than 3 inches within a 6-hour period.
- Flooding threat decreases Sunday into the workweek.

Pending Individual Assistance Declaration Request
