WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

April 3, 2026

Severe Weather Outlook Central U.S.

- Parts of the Midwest are once again in the bull's-eye of a line of severe thunderstorms that are expected to produce large hail and damaging wind gusts beginning Friday afternoon from Iowa to Texas — the overall threat covers more than 65 million people over 1,500 miles from the Big Bend of Texas to western Pennsylvania.
- Portions of southern Iowa and northern Missouri are under a Level 3 out of 5 risk of severe thunderstorms, according to NOAA's Storm Prediction Center. This area faces the greatest risk of seeing supercell thunderstorms capable of producing tornadoes — just south of Thursday's most intense storms.
- A second severe weather system will move out of the Rockies and into the Plains by Friday afternoon.
- Thunderstorms are expected to fire ahead of and along the associated cold front from the Ohio Valley to Texas in the afternoon and evening. All hazards are possible, including damaging winds, large hail and tornadoes.
- Storms are forecast to organize into a line from western Iowa to West Texas Friday evening and charge eastward overnight, with the greatest threat being damaging wind gusts in Kansas and Oklahoma.
- In addition to the severe weather hazards, the FOX Forecast Center noted that the significant moisture in the atmosphere and the repeated number of storms moving across the same region could lead to flash flooding from northern Texas into southwestern Missouri, where a Level 2 out of 4 flash flood risk is in place through Saturday morning.
- A widespread 2-3 inches of rain is possible from Dallas to Kansas City through Saturday.

Pending Individual Assistance Declaration Requests

State	Event	Date Submitted	Approved/Denied/Pending	Number of Counties/Tribes
IL*	Severe Storms and Flooding July 25 - 28, 2025 (Appeal)	11/21/2025	Pending	3 Counties
