WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

February 22, 2022

Severe Weather Outlook

- Residents from northeastern Louisiana to western Kentucky are gearing up for potentially damaging thunderstorms on Tuesday following a round of severe thunderstorms that ripped through northern Texas, southeastern Oklahoma and northwestern Arkansas Monday night.
- "Dangerous storms from Monday night will spill over into Tuesday morning from northern Arkansas and southeast Missouri. These storms will rumble east through this morning across the Mississippi River into southern Illinois and Indiana, Kentucky and northern Tennessee," stated AccuWeather Meteorologist Matt Benz.
- A tornado warning was in place for Mayfield, Kentucky, shortly before 7 a.m. local time Tuesday. Mayfield was leveled by a powerful EF4 tornado in mid-December that left catastrophic damage throughout western Kentucky.
- "As today's system evolves, storms will explode farther south across Mississippi, Alabama and Tennessee. Any of these storms will be capable of producing damaging winds, flooding downpours and a tornado," explained Benz.
- Drenching rain spreading from the Mississippi Valley and the Northeast will bring the threat of flash flooding through Wednesday morning, forecasters say.
- According to the NWS, some area rivers and streams across the Tennessee and Ohio valleys are already at a minor flood stage.
- The highest rainfall totals are expected to be from northeastern Arkansas to the eastern Kentucky border through Wednesday morning. Cities such as Nashville and Louisville will be in the zone of the heaviest rainfall, with an AccuWeather Local StormMax™ of 6 inches predicted.
- On Wednesday, rain and thunderstorms will return to the Gulf Coast as the second storm shifting across the country this week arrives in the central U.S.
- Forecasters say that storms on Wednesday will be isolated and likely not become severe.
