WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

June 8, 2022

## Severe Weather Outlook

- Severe thunderstorms with downpours, damaging wind gusts, large hail and tornadoes have frequented the central United States this week, and although portions of the region may catch a brief break on Wednesday, AccuWeather forecasters say that the threat of severe weather will return by Thursday.
- "A strengthening heat dome in the Southwest has expanded across much of Texas and Oklahoma," said AccuWeather Storm Warning Meteorologist Michael Stahlman. "On the northern edge of this heat dome, there have been disturbances in the jet stream which have aided in the development and strengthening of clusters of thunderstorms," explained Stahlman.
- Thunderstorms tend to track along the northern edge of heat domes, which is setting up some parts of the central U.S. for multiple rounds of thunderstorms over the course of several days.
- The risk for severe weather on Wednesday will shift farther to the southeast. Little Rock, Arkansas; Memphis and Nashville, Tennessee; and Lexington and Louisville, Kentucky, are just a few cities where flooding downpours, hail, damaging wind gusts and even an isolated tornado will be possible on Wednesday.
- The risk of severe thunderstorms will shift back to the central Plains on Thursday with storms that are more potent than what is experienced on Wednesday.

## Pending Individual Assistance Declaration Request

State	Event	Date Submitted	Approved/Denied /Pending	Number of Counties/Tribes
MS	Severe Storms, Straight-Line Winds & Tornadoes March 22, 2022	4/28/2022	Pending	4 Counties
