WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

May 8, 2023

## Severe Weather Outlook

- With the spring season in full swing, AccuWeather meteorologists warn that a dozen states from the central United States to the East Coast could be at risk for some severe weather in the coming days.
- Severe weather began first thing on Sunday, with severe-warned storms firing up in Indiana and Ohio during the morning. More isolated storms fired up in portions of Texas, bringing severe hail and damaging wind gusts to central portions of the state.
- Sunday was the most active severe weather day of the past week. The Storm Prediction Center received over 400 reports of severe hail and wind, mainly in a region extending from Kansas to Illinois, and southward into Kentucky.
- Widespread severe weather outbreaks are unlikely in this weather pattern, but more localized pockets of severe weather are anticipated almost every day in this upcoming week.
- On Monday and Tuesday, the same main storm set to bring severe weather to the Midwest will move eastward, spreading thunderstorms from the Ohio Valley and Southeast to the mid-Atlantic.
- Communities from Springfield, Missouri, to Dayton, Ohio, should all be on the lookout for thunderstorms capable of producing damaging winds and hail.
- Thunderstorms could also be particularly feisty across southern Virginia, North Carolina and the eastern half of South Carolina on Tuesday, especially in the afternoon and evening.
- Any storms that fire up during this time could be heavy, bringing torrential downpours and sudden gusty winds. Locations such as Myrtle Beach, Raleigh and Virginia Beach may all be threatened by these strong storms.
