WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

September 30, 2025

Tropical Activity

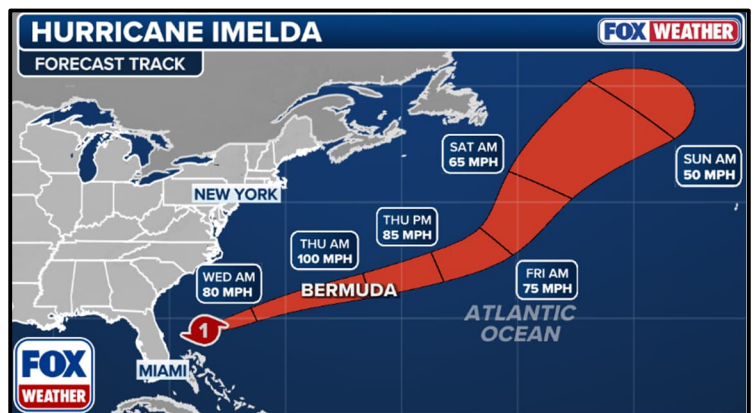

Atlantic – Hurricane Humberto (CAT 2)

- Located 275 miles W of Bermuda
- Maximum sustained winds 100 mph; moving NW at 17 mph
- Hurricane-force winds extend outward up to 70 miles from the center; tropical-storm-force winds extend up outward up to 205 miles from the center
- Continued weakening is forecast, with Humberto expected to become a strong extratropical system tomorrow.

Atlantic – Hurricane Imelda (CAT 1)

- Hurricane Imelda formed off the southeastern U.S. coast on Tuesday morning, and forecasters say the deadly storm will likely strengthen and could become a Category 2 hurricane as it approaches Bermuda later this week.
- And while a landfall in the U.S. is not expected, the effects of Hurricane Imelda are being felt up and down the East Coast from the Southeast through the mid-Atlantic and into the Northeast and New England.
- Rip currents are a major concern this week due to Hurricane Imelda, as well as Hurricane Humberto spinning in the Atlantic. Both storms are kicking up massive waves, leading to rip currents at beaches along the East Coast.
- As of the latest advisory from the National Hurricane Center (NHC), Hurricane Imelda has maximum sustained winds of 75 mph with some higher gusts, and strengthening is likely to continue.
- The center of Hurricane Imelda is about 755 miles to the west-southwest of Bermuda and is moving off to the northeast at 7 mph.
- The NHC said that general motion is expected to continue Tuesday, followed by a turn toward the east-northeast at a faster forward speed by Tuesday night. On that track, the center of Hurricane Imelda should continue to move away from the Bahamas and quickly approach Bermuda by late Wednesday.
- In terms of rainfall, about 1-2 inches of rain is possible, with locally higher amounts of up to 4 inches, across coastal areas of southeastern North Carolina.
