WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

November 7, 2025

Severe Weather Outlook Eastern U.S.

- Storms are expected to develop across parts of Tennessee and the Ohio Valleys on Friday.
- More than 10 million Americans from Alabama through Kentucky are under the risk of severe storms.
- Thunderstorms will start Friday afternoon and persist into the evening with hail being the primary severe weather hazard.
- Main threats of the severe storm risk will be large hail where tropical moisture and the highest shear will be located, as threats of hail loom in Nashville, as well as areas in south-central Kentucky and Middle Tennessee.
- By Saturday morning most of the storms will have come to an end across the Mid-South, with the cold front forecast to stall and eventually dissolve.
- As Friday's storms dwindle, leftover boundaries will be the focus for any new severe storm developments over the weekend.
- Into the weekend on Saturday, a severe storm threat exists across most of the Southeast, extending across the region from Shreveport, Louisiana to Columbia, South Carolina.
