WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

May 24, 2021

## Tropical Activity

### Atlantic – Post Tropical Cyclone Ana

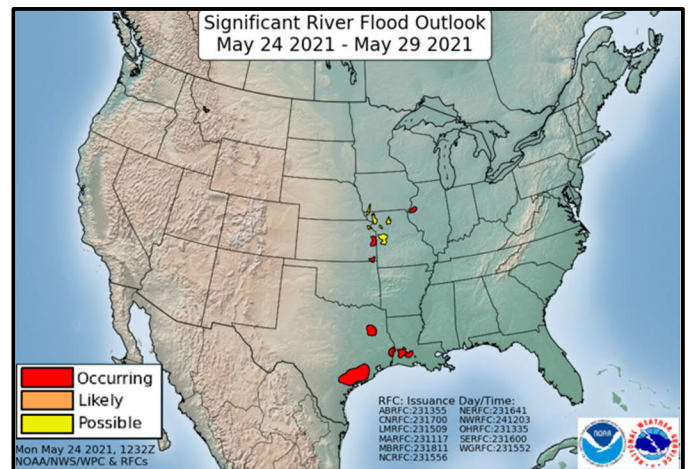

- The official start to hurricane season is a little more than a week away, but the first-named storm of the season formed early Saturday morning as Subtropical Storm Ana took shape over the Atlantic Ocean, east of Bermuda.
- Ana developed 200 miles northeast of Bermuda early Saturday morning.
- By Sunday evening, Ana was downgraded to a tropical depression, with sustained winds of 35 mph.
- The storm became post-tropical by Sunday night, with the National Hurricane Center (NHC) issuing its last advisory on the storm at 11 p.m. EDT.

## Severe Weather & Flood Activity

### Louisiana

- After a week of seemingly relentless heavy rainfall, with a brief tropical storm threat mixed in as well, residents of flood-weary parts of Louisiana and Texas will finally get a break from the widespread heavy rain in the coming days.
- However, forecasters warn that the impacts of the heavy rain won't be so quick to end.
- While forecasters say the worst of the widespread heavy rain is over, not everyone is completely out of the woods yet with regard to heavy downpours. Heavy rain has shifted westward out of Louisiana and parts of far-eastern Texas, but the threat of locally heavy downpours will persist early this week along parts of the Texas Gulf coast into central and eastern Texas.
- Lake Charles, Louisiana, recorded over 12 inches in one day on May 17 and over 20 inches total so far in the month of May, adding to the string of extreme events that have affected the city in the past year.
- With the heavy rain over the last week aimed more at western Louisiana into Texas, at least five people were killed amid the flooding, according to Louisiana Department of Health.
- Roughly 1,300 people were under a mandatory evacuation Friday after a flood barrier known as an Aqua Dam failed and water began pouring over a roadway in Iberville Parish. Residents have since been allowed to return home.
- Many rivers across the region remain above flood stage, with some in moderate flood stage.
