WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

February 14, 2022

## Spring Flood Outlook

- The NWS is forecasting a near normal to below normal flood risk across the Upper Mississippi River and its tributaries this spring.
- Snowpack is generally below average for the basin which is a major factor in the lower flood risk.
- Drier than normal soils and near-normal river levels are also contributing to the lower risk as spring rains will be able to be absorbed and contained. Frost depths are at about 10" -25" in most of the Upper Mississippi Valley which are around normal for this time of year, though they are below normal in the Quad Cities.
- In the Cedar Rapids and Iowa City areas, the Cedar and Iowa Rivers are likely to see below-normal flooding. Flooding along with the Mississippi ad Dubuque is generally near to below normal.
- There is a low to moderate risk for ice jams. This could cause localized, but usually fleeting, flooding issues, especially in river bends or areas that are especially prone to ice jam development.
- Any additional heavy precipitation or rapid snowmelt could still change this outlook as it is based on current observations and forecasts. The long-range outlooks for March, April and May suggest slightly above normal rainfall in eastern Iowa.
- The next flood outlook will be released in 2 weeks on February 24.

## Joint Preliminary Damage Assessments

State	Event	Number of Counties for IA		Start-End
		Requested	Completed	
PR	Flooding Feb 4-8	6	4	2/9 - TBD

## Pending Individual Assistance Declaration Request

State	Event	Date Submitted	Approved/Denied /Pending	Number of Counties/Tribes
FL	Severe Storms, Straight-Line Winds & Tornadoes Jan 16, 2022	1/24/2022	Pending	2 Counties
