WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

February 23, 2024

Severe Weather Outlook

- The FOX Forecast Center is tracking a potentially dangerous storm system that's expected to impact most, if not all, of the Lower 48 states next week with some form of precipitation, including the potential for severe weather, heavy mountain snow, and rain.
- The action kicks off Sunday in the western U.S. and will eventually push across the country, where it will finally impact the East Coast by Thursday.
- More rain is expected in California, and although the rain amounts are expected to be much lower than what the state just experienced from a multiday atmospheric river storm this past week, there will be a threat of additional landslides and mudslides because the ground is so saturated.
- The FOX Forecast Center said that high winds are also expected across the interior West behind some cold fronts moving through the region on Monday and Tuesday.
- NOAA's Storm Prediction Center (SPC) has already highlighted areas of concern on Tuesday and Wednesday of next week that have the potential for strong to severe thunderstorms to develop.
- More than 21 million people from Chicago and Aurora in Illinois through St. Louis in the Midwest and into Little Rock in Arkansas and Tulsa in Oklahoma have been placed under a level 2 out of 5 on the SPC's 5-point severe thunderstorm risk scale.
- The severe weather threat shifts and expands by Wednesday and includes more than 30 million people from the Mississippi Valley and Southeast into the Ohio Valley.
- The SPC has placed cities such as Indianapolis, Columbus (OH), Memphis and Nashville (TN) and St. Louis in a level 2 out of 5 risk on Wednesday.

Joint Preliminary Damage Assessments

State	Event	Number of Counties for IA		Start-End
		Requested	Completed
