WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

March 14, 2025

Severe Weather Outlook

Central & Eastern U.S.

- A widespread and dangerous severe weather outbreak is expected to develop Friday and into the weekend as it unleashes its fury across the central and eastern U.S., impacting over 150 million people.
- The FOX Forecast Center said that multiple days of potent thunderstorms could bring destructive winds, large hail, and significant long-tracked tornado activity (EF-3 or higher).
- The main action on Friday will come in the form of a powerful squall line of storms which is expected to develop during the afternoon across Missouri and Iowa and charge east through the Mississippi Valley, the FOX Forecast Center said.
- The highest risk for tornadoes is over 750 miles from Davenport, Iowa, to Jackson, Mississippi.
- The overall tornado threat is over 1,000 miles long. The states with the most concern look to be centered in the mid-Mississippi Valley, including cities like St. Louis, Missouri; Memphis, Tennessee; Paducah, Kentucky; and Little Rock, Arkansas.
- On Saturday, the powerful storm system will continue tracking east as a tornado outbreak is possible across the central Gulf Coast states and Deep South into the Tennessee Valley.
- The storms will develop along the Mississippi River and quickly move east from midday to the afternoon, the FOX Forecast Center said. The line of supercells is then expected to swing through central and southern Mississippi into northern Alabama, central and east Tennessee and north Georgia.
- Cities like New Orleans, Louisiana, and Birmingham, Alabama, are under a Level 4 out of 5 risk, indicating a high likelihood of supercell thunderstorms capable of producing tornadoes and damaging winds.
- By Sunday, the storm will have traversed across the entire U.S. with its eye now on the East Coast, including the I-95 corridor. The threat of tornadoes will be confined from the Virginia coast south into the Carolinas. Damaging wind gusts and large hail will be the main threats.
