WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

November 18, 2024

## Potential Flooding

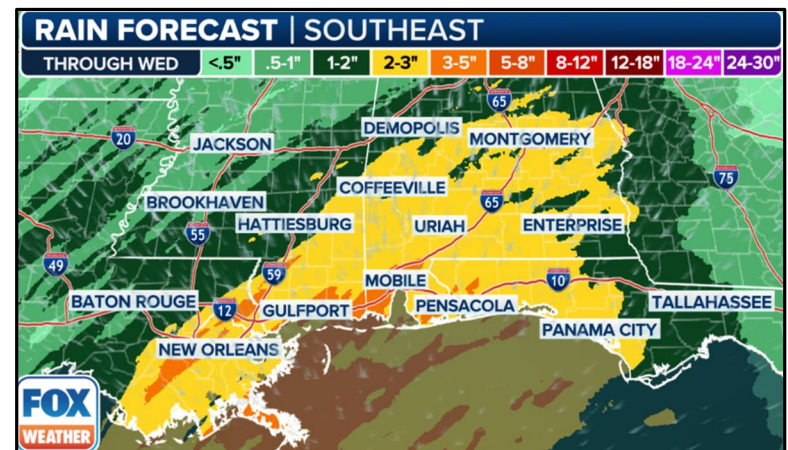

### Northwest

- A powerful bomb cyclone associated with a major atmospheric river is forecast to drench the West Coast, from Washington to California, midweek, potentially leading to flooding.
- A big stream of moisture is set to arrive Tuesday night and will stick around through late in the week, possibly into the weekend, the FOX Forecast Center said.
- Steady moderate rain for several days, potentially flooding roads, small streams and even larger rivers.
- From Wednesday to Friday, some areas could see 2-4 inches of rain daily, with even higher amounts possible in the mountains.
- Strong winds will also begin to blow in Tuesday evening as the storm moves in. Gusts of 60-70 mph are expected in exposed areas like ridges, headlands and parts of the coastal plains.

### Southeast

- Florida faces a widespread rainfall event mid-workweek that stems from the combination of a strong frontal boundary and moisture from the leftovers of Tropical Storm Sara.
- According to the FOX Forecast Center, the storm system will move through the U.S. Gulf Coast on Tuesday and Wednesday and produce scattered showers and thunderstorms.
- Forecast models suggest the heaviest rainfall will occur along the Interstate 10 corridor, where a widespread 2 to 3 inches of precipitation could occur, with locally higher amounts up to 5 inches.
- Cities such as New Orleans, Mobile, Alabama, and Pensacola, Florida, are all in the zone that could see the heaviest rainfall, while the rest of the Florida Peninsula is in store for a few inches of rain.
- Exact impacts will depend on how much moisture streams northward from the Caribbean and Gulf of Mexico associated with the tropical storm's remnants.
