WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

May 3, 2023

Severe Weather Outlook

- AccuWeather meteorologists say that the first week of May could include more severe thunderstorms following a busy month of April that resulted in frequent and far-reaching outbursts of destructive weather.
- A complex weather pattern is set to unfold through much of the week. A storm system that will bring showery weather and cool conditions to much of the West will send pieces of atmospheric energy into the Plains through this week, creating several opportunities for severe weather to unfold.
- The same storm responsible for producing a few instances of wind and hail on Tuesday will again strike the southern and central Plains Wednesday. Any thunderstorm that fires up will have the potential to turn severe, but the overall risk will be lower when compared to Tuesday.
- Another potent piece of energy will swing through the southern Plains Thursday, reinvigorating the severe weather threat.
- Thunderstorms from south-central Kansas to central Texas could turn severe Thursday afternoon through Thursday night and bring a whole host of hazards.
- In addition to hail and damaging winds, thunderstorms that erupt Thursday afternoon and continue through Thursday night could be capable of producing an isolated tornado or two.
- Larger cities from Oklahoma City to Dallas, Abilene and San Antonio, Texas, could experience these thunderstorms.

Pending Individual Assistance Declaration Request

State	Event	Date Submitted	Approved/Denied/ Pending	Number of Counties/Tribes
AL	Severe Storms, Straight-Line Winds & Tornadoes	4/25/2023	Pending	5 Counties
