WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

September 20, 2023

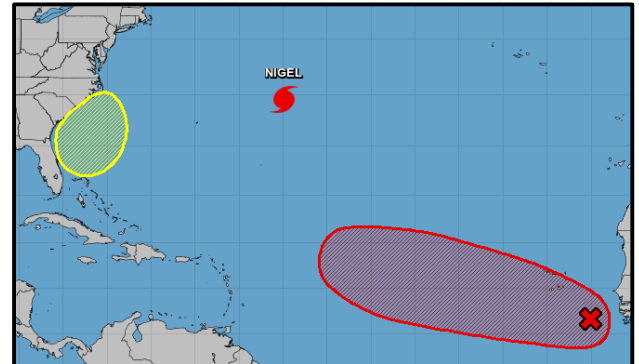

Tropical Activity

Atlantic – Hurricane Nigel (CAT 2)

- Located 590 miles ENE of Bermuda with maximum sustained winds 100 mph, moving north.
- No threat to U.S. territory.

Atlantic – Disturbance 1

- Currently located off the west coast of Africa moving W at 10-15 mph.
- A tropical depression is likely to form late this week or this weekend.
- Formation chance – 48-hour: Low (10%); 7-day: High (70%)

Atlantic – Disturbance 2

- Forecast to form east of the Florida peninsula. Some subtropical characteristics this weekend.
- Formation chance – 48-hour: Low (near 0%); 7-day: Low (30%)

2023 Atlantic Hurricane Mid-Season Update

- The Atlantic Hurricane Season reached its climatological peak on Sept. 10, but that doesn't necessarily coincide with less activity to come.
- So far, there have been 14 named storms this season, with the latest storm Nigel strengthening into a hurricane Monday. This makes for an above-average and active season, as we typically don't reach that number of named storms until November.
- Current ocean and atmospheric conditions, such as the record-warm Atlantic Sea surface temperatures, are counterbalancing the effects of the ongoing El Niño.
- Some of the biggest sea surface temperature anomalies lurk in the Gulf of Mexico, where the high heat content of the water means the area will have to be closely watched for major hurricane activity through the remainder of the season.
