WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

June 3, 2022

NOAA Tropical Activity

Atlantic – Disturbance 1

- The arrival of the first organized tropical system of the 2022 Atlantic hurricane season is imminent, AccuWeather meteorologists say, a point emphasized by the issuance of tropical storm warnings for the mainland U.S. A strengthening tropical rainstorm is poised to deliver torrential rain and gusty winds to a portion of the Florida Peninsula into Saturday.
- Tropical storm watches that were issued by the National Hurricane Center (NHC) for South Florida on Thursday were upgraded to tropical storm warnings late Thursday evening and were in effect for all of South Florida, including the Keys, Miami to West Palm Beach and Naples on Friday.
- Heavy rain and gusty thunderstorms were already rolling across South Florida on Friday, even though the center of the budding tropical system was about 400 miles to the southwest of Fort Myers. The tropical rainstorm is likely to become Tropical Storm Alex prior to reaching the southwestern part of the Florida Peninsula early Saturday.
- The tropical rainstorm, which AccuWeather meteorologists have been tracking all week, was dubbed Invest 91L on Wednesday by the NHC and then designated a Potential Tropical Cyclone late Thursday afternoon.
- The rain will be beneficial in some South Florida communities due to abnormally dry to drought conditions that have unfolded this spring. However, too much rain will fall in many locations and is likely to cause flooding in urban and low-lying areas.
- Much of the zone from the Keys to the Everglades and the Miami area is likely to receive a general 8-12 inches of rain with an AccuWeather Local StormMax™ of 20 inches. Much of that rain may fall in 24 hours and is more than enough to trigger street and highway flooding.
