

DAILY DART

WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

July 19, 2022

Severe Weather Outlook

- A potent storm system will quickly move around the northeastern edges of an expansive heat dome and reach the Northeast by Wednesday and Thursday.
- This system will be responsible for unsettled weather in the northern Plains, and that will be set to continue farther east.
- With an abundance of heat and moisture to work with, there will be a significant chance for some storms to turn severe in the eastern Great Lakes.
- In addition to damaging winds and hail, tornadoes will be possible in the most intense storms, forecasters say.
- The greatest risk of tornadoes may be centered on southwestern Ontario and eastern Michigan.
- By Thursday, the rain and storms will continue to trek eastward into the coastal areas.
