WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

March 2, 2023

Severe Weather Outlook

- A dangerous severe weather outbreak will get underway in the South later today and could produce long-lived, intense tornadoes as well as widespread damaging winds, large hail and flash flooding.
- The most widespread threat of severe thunderstorms appears to be Thursday afternoon and Thursday night across parts of the Deep South.
- Multiple rounds of severe thunderstorms are possible in some areas. Supercell thunderstorms packing tornado, very large hail and damaging wind threats could develop initially in central and northern Texas, southeast Oklahoma, southwest Arkansas and northwest Louisiana.
- Then, a squall line of severe storms packing destructive straight-line winds and tornadoes will track from eastern Texas to the lower Mississippi valley through the evening and overnight.
- Locally heavy rain may result in flash flooding, with the greatest threat Thursday and Thursday night. Areas from eastern Oklahoma and northeast Texas into much of Arkansas, southeastern Missouri, western Kentucky and western Tennessee are especially at risk.
- Parts of the Southeast northward to near the Ohio Valley may see some severe thunderstorms Friday and Friday evening.
- Areas from eastern Mississippi into Alabama, Georgia, far northern Florida, Tennessee, the Carolinas, southwestern Virginia, southern West Virginia, Kentucky and parts of southern Ohio and Indiana are included in the severe risk Friday. Damaging thunderstorm wind gusts and tornadoes are possible.

Pending Individual Assistance Declaration Request
