WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

April 17, 2025

Severe Weather Outlook Central U.S.

- Severe thunderstorms starting Thursday, capable of producing large hail, damaging winds and isolated tornadoes, are forecast to impact the central and eastern U.S.
- More than 1 million people are included in an upgraded Level 3 out of 5 risk zone from NOAA's Storm Prediction Center, with Omaha, Nebraska, in the bull's-eye.
- A few tornadoes in supercells could develop in a narrow corridor from eastern Nebraska to western Iowa.
- By Friday, the threat of severe weather will shift east and expand from the southern Plains into the Great Lakes region. Numerous thunderstorms are expected to develop in the afternoon and evening.
- The FOX Forecast Center said the environment will support a broad area of severe storms, potentially affecting a large area extending from Detroit to Chicago southwestward to Kansas City, Missouri; Oklahoma City, Oklahoma; and northwest of the Dallas-Fort Worth Metroplex in Texas. These storms will primarily pack a damaging wind and large hail threat.
- Saturday will see the severe storm threat area shift only a bit. Scattered severe storms seem possible from central Texas into the Ohio Valley on Saturday afternoon and evening. This will also signal the beginning of heavy rain and possible flooding as storms repeatedly drench the same areas, the FOX Forecast Center said.
- Easter Sunday will be a day to watch as ingredients may come together for a more formidable severe weather event, including more tornadoes.
