WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

April 25, 2025

## 2025 Tornado Activity

- America's tornadoes so far this year are on a pace not seen in 14 years and may have set a new all-time record for one spring month with the typically most active month of the year still ahead.
- Through April 22, there have been 603 reports of tornadoes so far in 2025, according to NOAA's Storm Prediction Center.
- That pace is higher than all but one other year - 2011 - in the past 15 years, according to the SPC. April 2011 smashed the record tornado count for any month (758), due to the late-month Super Outbreak and another multi-day mid-month outbreak in the South.
- The SPC has a preliminary estimate of 300 reports of tornadoes in March.
- In a detailed analysis, we estimate at least 223 tornadoes were confirmed by the National Weather Service in March. That's at least double the March average of 104 tornadoes over a 20-year period from 2004-2023.
- Once the tally is confirmed a few months from now, we'll know if 2025 will have smashed the March record of 234 tornadoes in 2022.
- While there have been some lulls in severe weather, April's tornado count is already above the average through the first three weeks.
- We estimate at least 218 tornadoes have been confirmed by the National Weather Service so far in April. That's already above the 20-year average of 202 tornadoes.
- Last April had the second most twisters (356) of any April since 1950, behind the record from 2011, according to the SPC.
- Last May had 530 tornadoes across the U.S., more than double the average and just shy of the May record from 2003 (542 tornadoes). It's too soon to tell if that will repeat itself this year.
