WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

April 29, 2022

Severe Weather Outlook

- A developing storm system is poised to deliver a couple of days of potentially dangerous and damaging storms from Friday to Saturday in portions of the Plains and Midwest, AccuWeather meteorologists say.
- The storm is expected to strengthen once it moves past the Rockies. As the storm ramps up, all facets of severe weather will be possible ranging from hail the size of golf balls and tennis balls to powerful wind gusts and flash flooding.
- An AccuWeather Local StormMax™ wind gust of 80 mph can occur with some of the strongest storms.
- A couple of tornadoes may be strong and could be on the ground for an extended period of time in portions of eastern Kansas, central and southeastern Nebraska and northeastern Oklahoma from late Friday to Friday night, according to AccuWeather Meteorologist Andrew Johnson-Levine.
- Some of the major cities that could be at risk for severe weather Friday evening include Topeka and Wichita, Kansas; Oklahoma City; Omaha and Lincoln, Nebraska; and Kansas City, Missouri.
- On Saturday, the risk of severe thunderstorms will shift farther to the east and northeast across part of the Mississippi Valley, including St. Louis, during the afternoon.
- The storms will also extend into a portion of the Great Lakes region that will include the Chicago metro area Saturday evening.

Declaration Request

Mississippi

- Governor Tate Reeves has requested a Major Disaster Declaration from President Biden for Individual Assistance due to tornadoes and severe weather which occurred on March 22, 2022.
- According to the National Weather Service, 27 tornadoes swept through the state that day causing major damage to homes and injuring three people.
- The State is requesting Individual Assistance for the following four counties: Clay, Hinds, Holmes and Kemper.
- Validated numbers show in those four counties there were: 68 homes destroyed or with major damage, estimating over a million dollars in property damage.

Storm Name "Ida" Retired

- Ida has been retired as a possible storm name for future hurricane seasons, officials said Wednesday.
- The name was retired "because of the death and destruction" caused by the Category 4 hurricane last year in Louisiana and elsewhere, according to the World Meteorological Organization's committee that controls the names of tropical storms and hurricanes.
- The 2021 hurricane caused catastrophic damage in southeast Louisiana and deadly flooding in the Northeast.
- Ida was directly responsible for 55 deaths and indirectly for 32 in the United States, the organization said. Ida's wind, rain, storm surge and tornadoes caused \$75 billion in damage in the United States, according to federal estimates.
- Imani will replace Ida on the rotating list of storm names. The names are repeated every six years unless one is retired.
