WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

December 19, 2022

Severe Weather Outlook

- Confidence continued to grow among AccuWeather's expert team of meteorologists on Monday that a significant storm would evolve later this week, threatening to bring a wide swath of snow, rain and fierce winds from the Plains to the Atlantic Seaboard.
- The intensifying storm will coincide with a surge of frigid air that will send temperatures to bone-chilling levels through the holiday weekend and could be one of the most intense and prolonged periods of Arctic air in decades during Christmastime.
- The plummeting temperatures with the storm could also lead to concerns of a rapid freeze-up.
- The storm's timing could not be worse given the increased number of travelers leading up to Christmas as well as the pressure retailers and shipping companies face to keep shelves stocked and items on track for delivery.
- Snow during at least part of the storm is likely to extend from parts of the southern Plains to the Midwest, Northeast and perhaps even the interior Southeast states during the period from Thursday, Dec. 22 to Saturday, Dec. 24.
- The first stage of the storm can cause snow to break out as early as Wednesday across the interior West, with Denver expected to pick up several inches of accumulation Wednesday night.

Pending Individual Assistance Declaration Request

State	Event	Date Submitted	Approved/Denied /Pending	Number of Counties/Tribes
GA	Flooding September 4-14, 2022	10/4/2022	Pending	1 County/4 Cities
