WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

March 7, 2025

2025 Spring Flood Outlook

- The Spring Flood and Water Resources Outlook is for the Quad Cities Hydrologic Service Area (HSA), which covers portions of eastern Iowa, northwest and west central Illinois, and extreme northeast Missouri.
- This includes the *Mississippi River* from above Dubuque, Iowa to below Gregory Landing, Missouri and its tributaries.
- The spring flood risk is below normal for the Mississippi River, and near to below normal for local tributary rivers.
- Additional precipitation events in the upper Mississippi basin will be the main factors determining the severity of flooding this spring.
- Minimal to no snow and below normal precipitation throughout the local area and the headwater areas in Minnesota and Wisconsin will result in a low-end flood risk at this time.
- Below normal soil moisture levels in the local area will provide more potential storage for spring rains.
- We continue to see these soils dry more, resulting in more room for water infiltration.
- Deep frozen soils remain, especially near the headwaters of the Mississippi River.
- Most streams throughout the local forecast area continue to see the decreasing trend in streamflows, with most below to well below normal.
- One of the biggest factors that will drive the flood threat this spring will be the spring precipitation that we receive.

Pending Individual Assistance Declaration Request

State	Event	Date Submitted	Approved/Denied/ Pending	Number of Counties/Tribes
OK	Severe Storms, Straight-line Winds, Tornadoes, and Flooding	12/20/2024	Pending	6 Counties
VA*	Severe Storms, Tornadoes & Flooding	2/16/2025	Pending	11 Counties

*Award of task order to contractor pending
