WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

July 5, 2023

## Severe Weather Outlook

- Scattered severe thunderstorms are forecast from the central High Plains eastward into the mid-Mississippi Valley and parts of the Midwest.
- NOAA's Storm Prediction Center (SPC) highlighted an area covering over 28.5 million from eastern Colorado, northeastern New Mexico and the Texas Panhandle through Illinois and far southeastern Wisconsin for a level 2 out of 5 on the severe thunderstorm risk scale.
- Chicago, Denver, St. Louis, Oklahoma City and Tulsa in Oklahoma and Colorado Springs in Colorado are some larger cities facing this higher risk.
- A complex of storms evolved over eastern Kansas and northwestern Missouri early Wednesday morning and will continue to roll southeastward, the FOX Forecast Center said.
- Some supercell potential is expected, and the FOX Forecast Center said large hail and damaging winds will be the primary concerns.
- The southeastern movement of the storms should lead to one or more thunderstorm complexes that spread toward northern Oklahoma during the overnight hours, according to the FOX Forecast Center.

## Joint Preliminary Damage Assessments

State	Event	Number of Counties for IA		Start-End
		Requested	Completed	
MS	Tornadoes, Thunderstorms & Straight-line Winds	2	0	7/6-TBD
AK	Spring Flooding	4	0	7/10-TBD
