WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

July 24, 2025

Tropical Activity

Atlantic – Disturbance 1

- The weak disturbance moving across the northern Gulf is being stretched by hostile upper-level winds.
- The National Hurricane Center is giving it a slight chance of developing circulation and becoming a tropical depression.
- Bands of strong thunderstorms will continue to push west across coastal sections of Louisiana and the north-central Gulf coast and into Texas tomorrow.
- The moisture will hang around at least through Saturday. Several inches of rain will fall in some spots along and just inland of the Gulf Coast. Local flooding is possible.

Latest Atlantic Hurricane Season Outlook

- Experts with Colorado State University (CSU) continue to expect an above-average Atlantic hurricane season in the weeks and months ahead.
- CSU's initial forecast this year called for 17 named storms, with 9 of those storms growing into hurricanes, and 4 of those becoming major hurricanes with winds of Category 3 status or stronger.
- The team announced on July 9 that they've pulled back the forecast just a hair—but they still expect an above-average season to progress over the coming weeks and months. CSU's latest forecast now calls for 16 named storms, 8 hurricanes, and 3 major hurricanes.
- "The primary reason for the slight decrease in the outlook is both observed and predicted high levels of Caribbean shear," the experts said in their July forecast update.
- The team added: "A warmer-than-normal tropical Atlantic combined with likely ENSO neutral conditions typically provides a more conducive dynamic and thermodynamic environment for hurricane formation and intensification."

2025 HURRICANE SEASON FORECAST				
	Atlantic Basin	Only The Gulf	CSU Forecast	Average
Named Storms	12-15	1-3	16	14
Hurricanes	6-8	1-2	8	7
Major Hurricanes	2-3	1	3	3
