Atlantic Hurricane Season 2025

- For the fourth consecutive year, the Atlantic hurricane season kicks off without a named storm forming before June 1.
- The Atlantic Basin hurricane season spans 183 days, running from the start of June through Nov. 30.
- Historically, the basin's first named storm tends to form around June 20.
- The seasonal outlooks from both Colorado State University and NOAA are predicting slightly above-average activity in the Atlantic.
- AccuWeather meteorologists are homing in on potential tropical development in the Atlantic during the second week of June in waters from the Caribbean to the Gulf.
- AccuWeather forecasters are now monitoring an area along the Southeast coast for potential subtropical or tropical development.
- Looking farther ahead, AccuWeather meteorologists are also monitoring a pulse of low pressure that works its way from east to west around the globe.
- "We believe there could be some tropical development over an approximate period sometime from June 7-12," AccuWeather Tropical Meteorologist Alex Duffus said.
- Observers would expect 2025's first feature to form before the average June 20 date.
- If the first tropical depression or tropical storm unfolds in the Atlantic during the second week of June, where it tracks will depend on how quickly it ramps up and the steering breezes at the time.
- The first name on the list of 2025 Atlantic tropical storms and hurricanes is Andrea.

Pending Individual Assistance Declaration Request

State	Event	Date Submitted	Approved/Denied/Pending	Number of Counties/Tribes
TN*	Severe Storms, Straight-line Winds, Tornadoes and Flooding	4/18/2025	Pending	15 Counties
MO	Severe Storms, Straight-Line Winds, Tornadoes, and Flooding	4/30/2025	Pending	20 Counties
MI*	Severe Winter Storm	5/16/2025	Pending	11 Counties

*Award of task order to contractor pending
