WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

May 4, 2026

Severe Storm Threat Midwest

- Severe weather will spread across the Midwest and Great Lakes late Monday before reaching the Southern Plains and the Deep South by mid-week.
- That's when the northern half of the cold front will bring heavy rain to the Northeast, as snow wraps behind the front across the Northern Plains and the Rockies.
- Behind the cold front, millions will see temperatures plunge 20 to 30 degrees below average, with conditions more like early March than early May.
- Millions could face threats ranging from damaging winds and large hail to tornadoes and flash flooding.
- Many of the same areas that were hit hard last month will be in the renewed threat zone, such as portions of Missouri, Iowa, Illinois, Oklahoma and Texas.
- Just within this last month, there have been more than 260 reported tornadoes across the central U.S., with the highest concentration centered over the Midwest.
- On Monday, thunderstorms are forecast to reach the Upper Midwest, Ohio Valley and Great Lakes by mid-to-late afternoon.
- With any storms that develop, the primary threats would be damaging wind gusts and hail.
- The front is expected to stall over the Southern Plains and the South on Tuesday, triggering multiple rounds of severe storms at least through Wednesday.
- A Level 2 severe weather threat covers parts of North Texas, including Dallas, as well as eastern Oklahoma and Arkansas. Large hail, damaging winds and tornadoes will all be possible with any storms that develop.
- Additionally, this setup is expected to bring several days of heavy rain beginning late Monday and continuing through midweek, impacting areas from Kansas to Ohio. The heaviest rainfall is expected Tuesday into Wednesday.

WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

May 4, 2026

- Due to a slow-moving front and the risk of storms—multiple thunderstorms hitting the same area in rapid succession—a flash flood risk is in effect Tuesday for areas from eastern Tennessee to southern Indiana.
- That heavy rain is expected to expand from the Tennessee Valley into the Ohio Valley and Northeast beginning Wednesday, along the northern portion of the massive cold front.

Joint Preliminary Damage Assessments

State	Event	Number of Counties for IA		Start-End
		Requested	Completed	
GA	Highway 82 Fire Apr 22-TBD	1	0	TBD
WI	Severe Storms / Tornadoes / Flooding Apr 13-23	14	0	4/30 - TBD
MI	Severe Storms / Tornadoes / Flooding Apr 10	44	0	5/11 - TBD
