WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

April 1, 2024

Severe Weather Threat

- April typically kicks off the most active three months for tornadoes in the U.S., and this year will be no exception as a widespread multiday severe weather outbreak is expected to impact tens of millions of Americans in the eastern half of the country between Monday and Tuesday.
- A widespread severe weather outbreak, with storms packing threats of large to very large hail, damaging wind gusts and tornadoes, is expected to develop from Monday afternoon through Monday night across a broad area from the southern Plains and the Ozarks into portions of the mid-Mississippi and Ohio valleys, perhaps even spreading into a small part of the mid-Atlantic.
- Monday's threat zone encompasses more than 53 million people and includes major cities such as Dallas in Texas, Oklahoma City in Oklahoma, St. Louis in Missouri, Indianapolis in Indiana and Cincinnati in Ohio.
- Potentially giant hail is possible in a corridor extending from North Texas to southern Illinois, including in major metro areas such as the Dallas-Fort Worth Metroplex and St. Louis. "We're talking the size of baseballs," FOX Weather Meteorologist Kendall Smith said.
- The greatest tornado threat is expected Monday evening from central and eastern Oklahoma into southern Indiana.
- A few tornadoes could be EF-2 or stronger in parts of northeastern Oklahoma, northwestern Arkansas, southwestern Missouri and southeastern Kansas.
- A continuation of Monday night's severe storms is expected farther east on Tuesday, with the threat stretching from the Ohio and Tennessee valleys eastward into the mid-Atlantic and southward to the central Gulf Coast states.
- Wind damage and isolated large hail are possible across this widespread zone that comprises more than 58 million people, including the cities of Cincinnati in Ohio, Louisville in Kentucky, Charleston in West Virginia, Nashville in Tennessee, Baltimore in Maryland and Washington, D.C.
- The tornado threat is expected to be greatest from Middle Tennessee, including the Nashville area, north northeastward into central and northern Kentucky.
