WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

July 13, 2020

Severe Weather Outlook

- A slow-moving frontal boundary, along with plenty of warmth and humidity, will trigger severe storms Monday from Denver to Fargo and Minneapolis.
- All modes of severe weather are possible – destructive straight-line winds, large hail and tornadoes.
- Straight-line winds possible, with gusts reaching 75 mph in spots from eastern Colorado to southern and central Nebraska, as well as western Kansas.
- Gusts could be as strong as 60 to 70 mph in other areas like Denver, Colorado; the Oklahoma Panhandle; Omaha, Nebraska; Sioux Falls, South Dakota; Fargo, North Dakota; and Minneapolis, Minnesota.
- Hail the size of golf balls or larger could pound many of these areas, or spots in between, and isolated tornadoes will touch down.

COVID-19 Update

- New U.S. coronavirus cases reached record levels over the weekend, with deaths trending up sharply in a majority of states.
- Although testing has remained flat, 20 states and Puerto Rico reported a record-high average of new infections over the past week.
- Five states — Arizona, California, Florida, Mississippi and Texas — also broke records for average daily fatalities in that period.
- The U.S. has surpassed 3.3 million cases with over 135,000 deaths, according to Johns Hopkins University.
- Globally, there have been 12.9 million cases and over 569,000 deaths.
- Large and small labs running 24/7 can't process samples quickly enough. That means COVID-19 test results are delayed a week or longer in hot spot communities, undercutting public health efforts to track, isolate and prevent spread.
- The World Health Organization reported more than 230,000 infections Sunday, setting a global record for new infections announced in one day.
