WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

July 21, 2020

Tropical Activity

Atlantic – Disturbance 1

- A tropical wave is producing a large area of disorganized showers and thunderstorms over western Cuba, the northwestern Bahamas, southern Florida and the adjacent Atlantic and Caribbean waters.
- Gradual development of this system is possible while it moves west-northwestward during the next few days.
- This system is expected to move over the southeastern Gulf of Mexico later today, the central Gulf on Wednesday and the northwestern Gulf on Thursday and Friday.
- Formation chance through 48 hours: Low (30%)
- Formation chance through 5 days: Medium (40%)

Atlantic – Disturbance 2

- Located about midway between the west coast of Africa and the Lesser Antilles.
- A tropical depression could form during the next day or two while the low moves westward at around 10 mph over the tropical Atlantic.
- By the weekend, however, less favorable conditions should limit additional development.
- Formation chance through 48 hours: Medium (60%)
- Formation chance through 5 days: Medium (60%)

East Pacific – Tropical Storm Douglas

- Tropical Storm Douglas formed in the East Pacific late Monday.
- Douglas is moving west-northwest at a speed of 14 mph and has maximum sustained winds of 60 mph.
- It is currently located about 1,085 miles southwest of the southern tip of Baja California, Mexico.
- "If Douglas stays on a steady west-northwest path, it could pass near or just south of the Hawaiian islands," said AccuWeather Senior Meteorologist Adam Douty.
