WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

February 15, 2022

Severe Storm Outlook

- Eleven states are under threat of major severe weather outbreak.
- The severe weather outbreak will be associated with a potent storm that is forecast to swing out of the Rockies and travel across the Plains and Mississippi Valley this week, bringing snowfall to the locations to the north and west.
- The storm's warmer side will bring the risk of tornadoes in the south-central United States from Wednesday evening through Thursday evening.
- A number of violent storms can occur after dark on Wednesday, AccuWeather meteorologists warn, and all forms of severe weather are possible.
- The most common threats from the storms are likely to be powerful wind gusts, with an AccuWeather Local StormMax™ estimated to be 80 mph. There is also the risk of flash flooding and a few storms that could unleash large hail.
- The threat zone AccuWeather forecasters have highlighted extends to the east and includes Little Rock, Arkansas, Memphis and Nashville, Tennessee, and even parts of western Kentucky that were hit hard by a historic tornado outbreak in December 2021.
- The first thunderstorms are projected to erupt in central portions of Texas and Oklahoma on Wednesday evening and strengthen, expand and shift eastward Wednesday night through northeastern Texas, eastern Oklahoma, western and central Arkansas, and northwestern Louisiana.
- On Thursday, the severe weather and tornado threat is likely to progress eastward from Louisiana, eastern Arkansas and southeastern Missouri through Mississippi, Tennessee, Alabama and western Kentucky.
- Severe storms may extend as far to the north as the Ohio River and as far to the east as the southern Appalachians by Thursday night.
