WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

July 10, 2023

Tropical Activity

Atlantic – Disturbance 1

- An area of low pressure is expected to form in a day or so several hundred miles to the east-northeast of Bermuda.
- This system could acquire some subtropical or tropical characteristics during the middle to latter part of this week while it moves generally eastward.
- Formation chance through 48 hours...low (near 0%); 7 days...low (30%)

Flash Flooding Activity

New York

- A slow-moving storm system brought heavy rain across a wide section of New York State on Sunday evening, flooding streets, prompting dozens of rescues for drivers whose vehicles were stranded on inundated roads and causing at least one death, the authorities said.
- The Hudson Valley was the most affected by the storm system on Sunday, with sections of the area getting between five and eight inches of rain, the National Weather Service said.
- The epicenter of the storm struck West Point, the U.S. Military Academy in Orange County, which had about eight inches of rain as of Sunday night.
- Gov. Kathy Hochul said on Sunday night that there were additional “missing individuals” in Orange County, saying that in one instance a house had been swept away into a stream. She declared a state of emergency for Orange and Ontario Counties on Sunday night.
- Flood watches and warnings were still active across a large swath of the Northeast on Monday morning.

Pennsylvania

- In central Pennsylvania, some of the first reports of flooding occurred around 12 p.m. EDT in Juniata County, where roads were washed out. As the rain moved east, a bevy of flooding reports came in for the eastern part of the state into the evening.
- Trained spotters reported a water rescue was underway for a truck trapped in flooding in Berks County, Pennsylvania, just before 5 p.m. EDT on Sunday. Several roads in the area were also impassable due to the rising water, including U.S. Highway 22 and Pennsylvania Route 309.
- As the deluge of rain moved northeast, emergency management officials in Durham Township, Pennsylvania, -- located about 12 miles southeast of Allentown -- reported evacuations due to rising water in the area.
- The highest rainfall total came from Chalfont, Pennsylvania, which is located 20 miles north of Philadelphia.
- A total of 8.01 inches of rain was reported in Chalfont as of 10 p.m. EDT Sunday. Reading, Pennsylvania, recorded 5.35 inches of rain on Sunday, breaking its daily maximum rainfall record previously set in 1952.
