WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

May 10, 2023

## Severe Weather Outlook

- AccuWeather meteorologists say additional bouts of severe weather, along with a growing flash flood risk, will pose a threat to lives and property across the nation's midsection through the weekend.
- The feistiest thunderstorms focus solely on the Plains during the latter part of the week. By the weekend, a life-threatening flash flooding situation could evolve over Texas.
- "People living in areas from Denver to Rapid City, South Dakota, on southward to the Red River and communities like Amarillo and Lubbock, Texas, should be on alert for potent thunderstorms during the middle of the week," AccuWeather Senior Meteorologist Courtney Travis said.
- Thursday into Thursday night, the severe weather zone will shift slightly eastward to encompass places such as Sioux Falls, South Dakota; Omaha, Nebraska; Wichita, Kansas; and Oklahoma City.
- During Wednesday and Thursday, risks will encompass the whole gamut of severe weather hazards, such as large hail and high winds capable of toppling trees, power lines and even high-profile vehicles. Several tornadoes can also occur.

## Flash Flood Risk

### Texas

- An extended period of rain and thunderstorms is expected across western, southern and central Texas from late this week and into the weekend, leading to the risk of widespread flooding in some areas.
- The core of heaviest rain is expected to fall from near San Antonio into the Hill Country west of the city.
- Rainfall can reach 8-12 inches across a portion of south-central Texas, with an AccuWeather Local StormMax™ of 20 inches possible in spots. Outside of this zone of the heaviest rain, 1-2 inches, or more, can fall.
- "Rapidly rising and quickly flowing water associated with flash flooding can be a significant threat for people in the vicinity of the Southern border and also farther northeast in Texas," AccuWeather Chief Meteorologist Jonathan Porter said. "Should flash flooding occur near the border, a serious humanitarian situation could evolve."
- The greatest risk of flash flooding near the Rio Grande may occur in the vicinity of the major ports of entry of Eagle Pass and Laredo from Friday into Sunday.
