WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

January 23, 2023

Severe Weather Outlook

- Ample rainfall and a severe storm risk is aiming for the Southern states from Tuesday to Wednesday evening.
- “A new storm moving out of northern Mexico, which will gather moisture from the Gulf of Mexico late Monday night into Tuesday morning, will be the impetus for the severe weather risk that begins in the Lone Star State on Tuesday,” explained AccuWeather Senior Meteorologist Bill Deger.
- The primary concern across central Texas on Tuesday will likely be substantial rainfall and periods of gusty winds.
- However, as the day progresses, AccuWeather meteorologists say that locations farther east and southeast along the Gulf Coast of Texas, Louisiana, central and southern Mississippi and Alabama will face additional threats toward evening.
- “By late morning and afternoon, storms could start to turn severe in southeastern Texas, before spreading into the Lower Mississippi Valley on Tuesday night. Heavy, flooding rains are a big concern, but many storms will also be capable of producing damaging winds or even a tornado,” stated Deger.
- Cities facing a moderate risk for severe weather from Tuesday evening and night include Baton Rouge and New Orleans, Louisiana, Mobile, Alabama, and Pensacola, Florida.
- Into the morning hours on Wednesday, the threat of strong thunderstorms will shift eastward into Georgia and the northern panhandle of Florida.
- Thunderstorms will continue to push onward along the Southeast coast into Wednesday evening, bringing heavy rainfall and the risk for travel disruptions as far as North Carolina.

WSP USA Inspection Services Active Disasters

Disaster Number and State	Disaster Type	Number of Counties Declared	Days Since Launch	Registration Deadline
4671 PR	Hurricane Fiona	78 Municipalities	122	11/21/2022
4673 FL	Hurricane Ian	26 Counties	113	1/12/2023
