WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

April 20, 2021

2021 Atlantic Hurricane Season

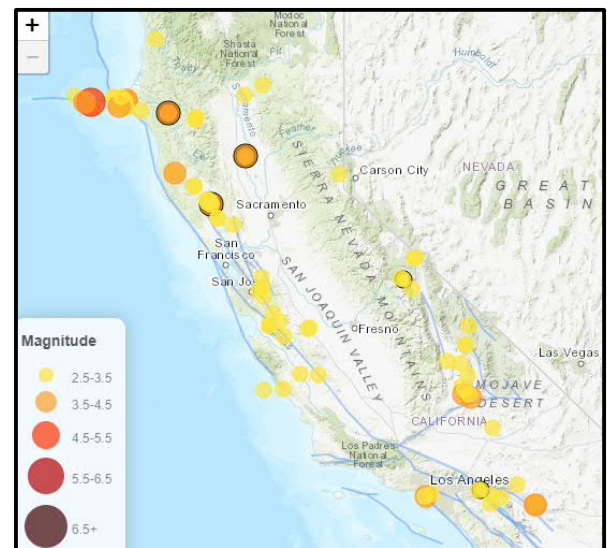

- The 2021 Atlantic hurricane season is about six weeks away, but the past six seasons have each gotten off to an early start.
- Officially, the Atlantic hurricane season runs from June 1 through November 30.
- Since 2015, at least one named storm has developed before June 1 each hurricane season, some of which have had impacts in the United States and elsewhere in the Atlantic Basin.
- The National Hurricane Center has not yet adjusted the start of hurricane season earlier to account for these pre-season storms. However, beginning this year, they will begin issuing routine Atlantic tropical weather outlooks on May 15, rather than June 1.
- At least one named storm has formed prior to June 1 in 10 of the last 18 years through 2020. There were a total of 13 out-of-season named storms during that time.
- The majority of these developed and meandered, or made landfall along the coast from North Carolina to northeastern Florida.

Earthquake Activity

California

- An earthquake of magnitude 4.0 was recorded early Tuesday in Humboldt County, the U.S. Geological Survey said. It followed two of similar size Monday in Northern California.
- Tuesday's quake, at 2:48 a.m., was centered near the Eel River about 13 miles east of Redway. The USGS website received just a handful of reports from the sparsely populated area.
- More widely felt were two quakes Monday, one magnitude 3.8 at 7:39 p.m., in Glenn County 10 miles east of Willows.
- A second magnitude 4.0 at 11:50 a.m., on the Lake-Sonoma county line six miles west of Middletown. It drew hundreds of reports from Santa Rosa and throughout Lake, Sonoma and Napa counties.
- There has not been a quake larger than 4.0 within California since a 4.2 on Jan. 16 near Aromas.
