WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

December 18, 2023

## Severe Weather & Flood Activity

### East Coast

- Flood Watches and Warnings have been posted for a large chunk of the Northeast as heavy rain continues to fall on Monday.
- According to PowerOutage.US, more than 180,000 customers were without power from New York and New Jersey to New England early Monday morning due to strong, gusty winds knocking down tree limbs and power lines.
- Eleven states from Maryland to Maine were under flood watch on Monday morning. And high wind alerts were issued from North Carolina to Maine, with wind gusts expected to be up to 60 mph.
- Due to the strong winds bringing higher storm surges, coastal flooding will also be a widespread issue, with 20 million people under coastal flood alerts.
- The East Coast is still predicted at a wide swath to accumulate 2 inches to 6 inches of rain, with locally higher amounts reaching up to 8 inches. Shoreline communities could possibly see 1 foot to 2 feet of inundation along low-lying areas near waterways.
- More than 16 inches of rain fell in some areas between Charleston and Georgetown, flooding neighborhoods, stalling cars and prompting flash flood emergency for the area. A few areas received about 6 inches of rain in six hours.
- The National Weather Service office in Charleston said the tide in the Charleston Harbor peaked at 9.86 feet (mean lower low water) just before noon local time. Not only is that the highest tide on record not associated with a tropical cyclone, but it's topped only by Hurricane Hugo in 1989, an unnamed hurricane in 1940 and Hurricane Irma in 2017.
