March 2, 2022

Winter Storm & Flood Activity Pacific Northwest

- An extreme atmospheric river unleashed heavy rain and snow over the Pacific Northwest over the last three days of February, bringing significant flooding, avalanche threats, landslides and wreaking havoc on roadways.
- The deluge shattered daily rainfall records in Seattle, according to the National Weather Service (NWS), and the Emerald City wasn't the only place to break daily rainfall records.
- The new daily record of 2.97 inches of rain in Seattle surpassed the previous record of 1.46 inches set back on Feb. 28, 1972. Feb. 28 also took the spot for the fourth-wettest February day on record.
- Heavy rain that saturated the ground tripped many mudslides across parts of Washington Monday.
- A nine-mile stretch of State Route 7 was closed in Lewis County, Washington, on Monday due to flooding near Warner's Creek, according to the Washington State Department of Transportation.
- And the precipitation impacts weren't limited to rainfall. Snowfall at higher elevations was significant also.
- Flood watches, warnings and advisories were in effect through Thursday across parts of Washington.
- Forecasters warned that recent rainfall and runoff could cause rivers, creeks, streams and other low-lying areas to flood.
