WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

February 28, 2022

Winter Storm Activity

Pacific Northwest

- AccuWeather forecasters say that the Pacific Northwest is gearing up for numerous rounds of stormy weather this week.
- An active storm track has developed across the West Coast, and locations from Northern California to western Montana are expected to receive ample rain and snow across the northern Cascades and the northern Rocky Mountains.
- Through midweek, the potent upper-level winds of the jet stream will bulge northward and guide storms from the Pacific into Washington, Oregon, Northern California and inland regions.
- On Sunday, avalanche warnings were put in place for the western and eastern slopes of the Washington Cascades. The warnings noted a high level of danger for areas involving Stevens, Snoqualmie and White passes.
- On Monday morning, both Stevens Pass and Snoqualmie Pass were closed due to the wet and heavy snow that spread across the region on Sunday.
- Most of the snow will gradually shift eastward from the northern Cascades into the northern Rockies from Monday through Tuesday.
- The heaviest rain is expected to spread across western Washington and Oregon on Monday as Pacific moisture is drawn into the region. Meteorologists note that rainfall amounts can range from 2-4 inches early this week from Portland, Oregon to Seattle, with locally higher amounts on the windward sides of the mountains.
- In addition to the soaking rain, winds are expected to rattle the coast through Monday evening. Wind gusts upwards of 40 mph will be possible at times.
- On Wednesday, another storm will arrive along the Northwest coast and spread additional rainfall to western Washington and Oregon.

Joint Preliminary Damage Assessments

State	Event	Number of Counties for IA		Start-End
		Requested	Completed	
TN	Severe Ice Storm and Flooding Feb 3-4	1	1	2/22 - 2/24
